

Multi Office Design

Outsourced Telephony Services with Mobile VoIP!

In this design there is a single Cloud PBX or telephone system shared between two offices. One in Singapore and the other in Hong Kong.

Both offices has access to the local country public telephone system.

Each office can place local calls in the other country.

All calls internally are FREE as all user are all on the same system.

Some countries do not offer access to their public telephone system via SIP trunking so this design would not be applicable.
